Summary

As a Data Enthusiast with a passion for data engineering and analytics, I have strong skills in data modeling, ETL processes, and cloud technologies. With hands-on experience using AWS services, I am eager to apply my technical skills to data engineering roles. My goal is to optimize data pipelines, improve data management processes, and deliver actionable insights that drive business success.

Education

Bachelor of Computer Science and Informatics *August 2022 – Present*
Delta University for Science and Technology
Data Analytics Scholarship - Digital Egypt Pioneers Initiative (DEPI) *October 2024 – Present*
Ministry of Communications and Information Technology (MCIT), Egypt

Experience

Data Analyst Intern *Oct 2024 – Sep 2024*
NeuronetiX, Hybrid

- Performed statistical analysis on large datasets using Python and SQL to identify trends and patterns for strategic decision-making.
- Conducted Exploratory Data Analysis (EDA) using Pandas, NumPy, and Matplotlib to extract meaningful insights from raw data.
- Created visualizations and reports using Power BI and Tableau to present data analysis results.

Business Intelligence Intern *June 2024 – Aug 2024*
PwC, Remote

- Built interactive dashboards using Power BI to improve data visualization for better decision-making
- Analyzed data to identify business trends and patterns, delivering actionable insights for strategic decisions
- Collaborated with cross-functional teams to align data strategies with business objectives, ensuring seamless project execution.

Projects

Real-Time ETL Data Pipeline ([Github Link](#) 📄)

- Developed a real-time data pipeline to **ingest, process, and predict** car prices using **Python**, **PostgreSQL**, and **scikit-learn**.
- Designed and implemented data cleaning and transformation steps using Pandas to ensure data quality.
- Integrated a **Random Forest model** to predict car prices and embedded the model seamlessly into the pipeline.
- Developed an ML pipeline with scikit-learn for seamless deployment across environments, alongside a robust monitoring system to track model performance and data quality
- Built detailed logs and audit trails to trace every step in the pipeline for transparency and troubleshooting

Real-Time API Data Pipeline ([Github Link](#) 📄)

- Built an end-to-end real-time data pipeline using **Python**, **PostgreSQL**, and **Apache Airflow** to ingest and process live API data.
- Automated data cleaning and transformation using **Pandas** and **Airflow DAGs** to ensure data consistency.
- Containerized the pipeline using **Docker**, enabling seamless deployment and scalability across environments.
- Implemented logging and monitoring mechanisms to track data freshness and pipeline performance proactively.

E-commerce Sales Data Analysis ([Github Link](#))

- Performed **Exploratory Data Analysis (EDA)** on e-commerce sales data using **Python** to uncover trends, patterns, and performance insights.
- Used multiple Python libraries, including **Pandas**, **NumPy**, **Matplotlib**, **Seaborn**, and **Plotly** for data cleaning, analysis, and visualization.
- Ensured high data quality through robust **data validation** and **automated cleaning pipelines**, enhancing reporting accuracy.

Data Mart Development Using SSIS ([Github Link](#))

- Designed and optimized **data integration** workflows using **SSIS**, improving data flow efficiency and achieving a 30
- Created an **Entity Relationship Diagram (ERD)** to define the data mart structure, aligning with business requirements.
- Containerized the pipeline using **Docker**, enabling seamless deployment and scalability across environments.
- Developed and executed SQL scripts for building dimension and fact tables, ensuring accurate schema design.
- Oversaw data loading and validation processes to maintain data quality and integrity across the data mart.

Sales and Customer Data ETL ([Github Link](#))

- Developed and implemented end-to-end **ETL pipelines** using **Python** and **SQL** to automate data extraction, transformation, and loading across multiple databases.
- Combined **Python libraries** (Pandas, SQLAlchemy) with **SQL queries** to handle complex transformations and data cleansing.
- Improved **reporting accuracy** and ensured **data consistency**, enabling more reliable business insights and data-driven decision-making.
- Created **automated scripts** to validate data integrity, reducing manual errors and ensuring smooth data flow.

Technical Skills

Programming Languages:	Python (Pandas, NumPy, scikit-learn), SQL, Scala
Database Systems:	PostgreSQL, Microsoft SQL Server, MySQL
Data Processing:	ETL Pipeline Design, Apache Airflow, SSIS
Cloud & Big Data:	AWS (EC2, S3, RDS), Hadoop, Spark, Kafka
Data Architecture:	Data Warehouse, Dimensional Modeling, Data Lake
Visualization:	Power BI, Tableau
Development Tools:	Docker, Git, GitHub, Linux, Bash

Certifications

- [AWS Certified Cloud Practitioner](#) 
- [Mathematics for Machine Learning and Data Science Specialization](#) 
- [IBM Data Analyst Specialization](#) 
- [Data Analyst Professional](#) 
- [Google Data Analytics Certificate](#)
